

Interface
Clinical Services

Interface Clinical Services (ICS) has a wealth of experience in assisting practices with the validation of their QOF clinical registers.

CASE STUDY

IMPROVING QOF PREVALENCE AND INCOME

"It's rewarding to see practices gain recognition for the care they're already providing."

SAM HEATHCOTE

Interface Clinical Services
Senior Remote Services
Technician

A PRACTICE PURCHASED THE ICS QOF ENHANCEMENT SERVICE TO IMPROVE DISEASE PREVALENCE, ENSURE THAT PATIENT CARE WAS OPTIMISED AND PRACTICE REVENUE WAS MAXIMISED.

A bespoke set of clinician designed searches were run on the practice clinical system to highlight potential patients missing from the registers.

A benchmarking report was generated for the practice to illustrate levels of QOF prevalence and income.

SERVICE OUTCOMES

There were 623 patients identified to be included onto the QOF clinical registers representing 8% of the total practice population and an additional annual QOF income of £26,000. This included:

- **HEART FAILURE** 81% increase in register size with an annualised value of £6,211.
- **OSTEOPOROSIS** 80% increase in register size, with an annualised value of £1,427.
- **DEMENTIA** 15% increase in register size, with an annualised value of £1,022.

70% of these patients were already receiving appropriate clinical care and simply needed a QOF data-set read code assigned in order to put them on the register.

WHAT OUR CUSTOMERS SAY...

"We requested a free QOF health check from Interface Clinical Services and they identified £26,162 of additional practice income. I'm now recommending this service to other practices."
